Professional + Innovative

SETTING THE STANDARD
IN FLAT ROOFING
EXCELLENCE.

Beneath the roof line,
where innovation meets
reliability.

Nimbus Roof Technologies brings together decades
of expertise in flat roofing.

Our systems are designed to meet the highest
industry standards, ensuring durability,
sustainability, and performance.

Our waterproofing systems comply with the highest
criteria of quality and durability, with our bitumen
systems achieving a BBA-accredited lifespan
exceeding 35 years. We utilise cutting-edge
technology - through non-destructive
testing including Aerial Drone and
Infrared Surveys, ideal for fragile decks
and projects with limited access,
ensuring a precise assessment of
locating hidden defects.

Nimbus are recognised for our
expertise, innovative design
solutions, and technical
consultancy. Additionally, our
energy-efficient roofing systems
are engineered to deliver
superior thermal performance,
fully meeting and exceeding
building regulations.

Fully tested to meet the latest fire
standards, we offer cold-applied,
self-adhesive, torch-on and flame
free systems, to ensure that the
right product is specified for each
project we deliver.

TABLE OF CONTENT

Introduction to Nimbus	01
Our Service and Delivery	02
Our Systems	03

The Four Cornerstones

Nimbus Roof Technologies is founded upon four pillars of excellence: Investigation, Design, Delivery, and Aftercare, guaranteeing meticulous attention and superior quality throughout every phase of the project.

01

INVESTIGATION

INVESTIGATION

Whether a general condition survey, moisture mapping or a leak investigation, Nimbus will fully diagnose your roofing and associated issues via our expert team, using the latest technologies, such as thermal, drone, and electrical impedance testing (Tramex).

Coupling this with our expert knowledge and a detailed survey, including intrusive core samples, we can diagnose the true extent of the defects on the roof and advise the best course of action for the property.

A detailed report outlining and evidencing the works will be produced, demonstrating full compliance with industry standards, providing a comprehensive assessment of the asset's condition, expected lifespan, and recommended course of action

02

DESIGN

DESIGN

Where required, a bespoke and comprehensive specification will be developed, leveraging cutting-edge materials to deliver a durable, long-lasting roofing solution.

Our products adhere to the highest industry standards, with our premier system boasting a BBA-certified lifespan exceeding 35 years.

Rather than simply replicating the existing roof, we collaborate closely with all stakeholders to enhance the roof design. Whether improving compliance, drainage, access, or resolving inherent design challenges, our experts focus on delivering the optimal outcome.

The system is carefully engineered to maximise both efficiency and longevity.

03

DELIVERY

Safety is a fundamental consideration from the earliest design stages, with careful integration of guardrails, permanent anchor points, roof hatches, and designated safe access routes. These elements not only facilitate secure maintenance and inspection but also ensure full compliance with health and safety regulations. By incorporating these features seamlessly into the roofing system, Nimbus guarantees that safety measures do not compromise the roof's performance or longevity.

Nimbus delivers expert design solutions tailored to both refurbishment projects and new build developments. Our team works closely with architects, contractors, and clients to ensure roofing systems are optimised for performance, compliance, and sustainability from concept through completion.

04

AFTERCARE

DELIVERY

Delivery is supported by trusted partnerships and approved contractors, creating a collaborative design and installation process that maintains the highest standards of quality and workmanship. These relationships ensure seamless communication and shared accountability throughout the project.

Regular site visits and progress reports allow close monitoring of works to confirm specifications are met and issues promptly resolved. Upon completion, a thorough final inspection is conducted alongside a comprehensive report detailing all works and demonstrating compliance with industry standards.

Detailed guarantees are then issued, giving clients full confidence in the durability and performance of their roofing system.

BESPOKE SPECIFICATIONS

BBA certified lifespan meeting the requirements of the highest possible standards.

AFTERCARE

We offer a range of guarantee packages tailored to suit your project requirements.

Our comprehensive guarantees are available for up to 30 years and cover materials, workmanship, and design, with the option to include consequential loss.

In the unlikely event of water ingress during the guarantee period, Nimbus will attend site promptly and undertake all necessary remedial works to restore the roof to a watertight condition.

To support the long-term performance of your roof, we offer optional annual maintenance inspections.

These visits ensure that any required upkeep is identified and actioned, helping to safeguard the roof's integrity and align with the expected lifespan of our high-performance systems.

Our Systems

DELIVERING INTELLIGENT WATERPROOFING SOLUTIONS

Whether part of a refurbishment project or a new-build scheme, every roof demands the same high level of design consideration and technical understanding. At Nimbus, we ensure the correct specification is identified from the outset, providing expert guidance throughout the process to guarantee long-term performance, buildability, and compliance.

COLD-APPLIED LIQUID SYSTEMS

Our cold-applied liquid waterproofing solutions are ideally suited to roofs with complex detailing, upstands, and restricted access. These systems are particularly effective in refurbishment scenarios, offering seamless application and strong adhesion to a variety of substrates - often without the need for full strip-out.

Nimbus can match the right system to each project's unique demands - whether driven by design constraints, budget parameters, sustainability goals, or required service life.

TECHNICAL DESIGN SUPPORT

Our experienced design team works collaboratively with you to develop a fully considered solution. This includes accommodating future roof utility enhancements such as integrated fall protection, photovoltaic arrays, or plant installations - all while preserving the integrity of the Nimbus waterproofing system. Every scheme is tailored to deliver high-performance, long-lasting results that meet both current requirements and future aspirations.

NIMBUS UltraTech SYSTEM

Bitumen Technologies

Using the latest hybrid technologies, this reinforced bitumen membrane (RBM) system uses a triple reinforced core, with advanced polymers - including APAO and SBS modifiers, giving it a BBA Durability in excess of 35 years.

FLAME FREE NIMBUS UltraTech SYSTEM

Bitumen Technologies

A complete flame-free system, featuring a self-adhesive option to eliminate fire risk during installation. This fully torch-free method aligns with the NFRC Safe2Torch initiative and British Standards, ensuring uncompromised safety and performance.

NIMBUS NimProtect Liquid Technologies

A very low odour cold applied, polyurethane (PU) system, the NimCoat liquid can be used for warm and cold roofs where complex detailing or fire risk dictates.

With a low solvent content, high solid content the NimCoat system creates a long-lasting and robust system for many roof and substrate types.

NIMBUS NimCure Liquid Technologies

A fast curing polymethyl methacrylate (PMMA) resin for use as a hybrid system alongside our Ultra RBM system for complex detailing, or as a standalone system where speed and robustness are key.

NIMBUS GUARANTEE

The Nimbus Single Point Guarantee provides industry-leading assurance.

KEY FEATURES

Up to 30 years of comprehensive coverage, ensuring watertight performance.

Covers all products sold by Nimbus.

Guarantee transferable to new property owners, adding long-term value.

Backed by insurance for added security and reassurance.

TECHNICAL EXCELLENCE + SUSTAINABILITY

Nimbus is committed to sustainability and technical excellence.

Our systems are designed to minimise environmental impact while delivering exceptional performance.

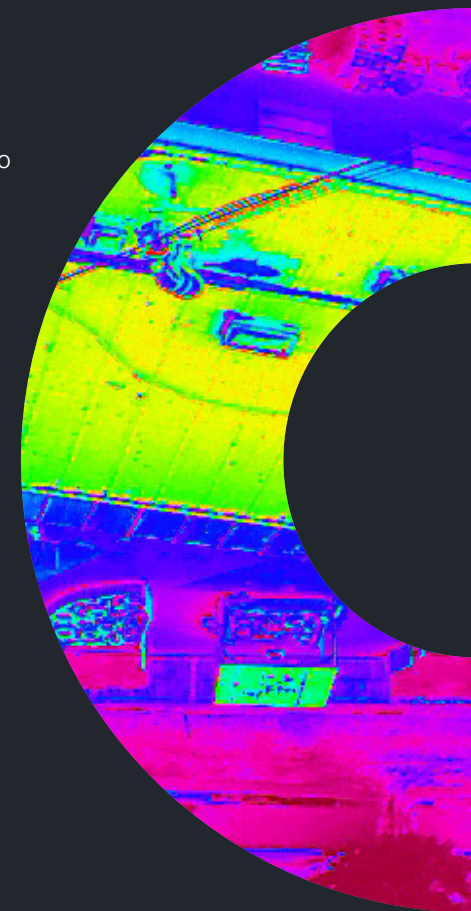

KEY FEATURES

Solar PV options and design service.

Extensive and intensive green roof.

Rooftop safety systems and access.

Long lifespans reducing the need for frequent replacements.
